From the Vice Chancellor's Desk

Leading as Second in 'Green Revolution' – Gujarat has achieved staggering Agricultural Growth table and has carved a niche in the field of Agricultural Development in India. As per the ET Beureau, Gujarat recorded the highest decadal agricultural growth rate during the period 2000-2010, that is, pulverising the 4% target as set by the Central Government for the farm sector. Gujarat Agro vision 2010 envisages improving the quality of life of the rural population, including those who are resource poor, by widening their employment opportunities and increasing their income. 63% of the population of Gujarat lives in rural areas and depends for its livelihood on agriculture and the rural non-farm sector that is interlinked with agriculture. The Government is sensitive to the role of Agriculture in Economic development with a vision.

The government envisages Agriculture promotion through focused agricultural research, and application of biotechnology, information technology and eco technology. Complimenting Hon'ble Chief Minister Shri Narendra Modi saheb's vision, as a major leap towards realization of this goal, the four agricultural Universities of Gujarat will expand their wings by starting a dozen more colleges across the state.

It gives me great pleasure to assert that Anand Agricultural University is about to start three new colleges that would include a horticulture college and two agricultural colleges.

Every year there is a demand of approximately 35000 agriculture graduates across the country, while the actual number of suplication ceases at 20000, resulting in a huge deficit of skilled manpower.

We are extremely grateful to the state government for according us the permission to start the new colleges to meet the futuristic demand for agriculture graduates.

(A. M. Shekh)
Vice-Chancellor
