17TH ANNUAL REPORT OF THE YEAR 2020-21
Research Chapter 4
Performa: A (Part I)

1. Importance of Research Centre / Department along with work carried out during 2020- 21 (in brief):

The prime mandate of College of Horticulture is to impart education in the field of horticulture science coupled conducting research on various disciplines like fruit, vegetable, flower as well as on postharvest technology. During the year 2020-21 following experiments were conducted under different departments of College of Horticulture:

Fruit Science Dept.:

- i. Effect of different organic manures and PGPR consortium on growth, yield and quality of sapota (*Manilkara achras L.*) cv. Kallipatti

Vegetable Science Dept.:

- i. Evaluation of vegetables during different season under different shade net condition

Floriculture and Landscape Architecture Dept.:

- i. Effect of spacing and nitrogen on growth, flowering, yield and shelf life of desi rose under middle Gujarat conditions
- ii. Evaluation of different chrysanthemum genotypes (loose flower) for yield and growth parameters
- iii. Feasibility of use of Reverse Osmosis (RO) waste water in gaillardia

Post Harvest Technology Dept.:

- i. Technology for production of Indian gooseberry (aonla) murabba
- ii. Development of production technology for vegetable based juice from carrot and tomato

Plant Protection Dept.:

- i. Bio-efficacy of botanicals against powdery mildew of fenugreek.
- ii. Evaluation of insecticides against aphid infesting in chrysanthemum
- iii. IPM technology for brinjal crop
- iv. Management of aphid in coriander through insecticidal seed treatments and bio-pesticides
- v. Survey and identification of causal organism of Mango malformation

- vi. Bio-efficacy of ready mix fungicides against powdery mildew of fenugreek

Natural Resource Management Dept.:

- i. Nutrient management through organics in broccoli
- ii. Evaluation of nutrient management modules in okra + cowpea - cabbage + fenugreek intercropping system

Basic Science Dept.:

- i. Comparison of different statistical models to forecast the area, production and productivity of major fruit crops of Gujarat
- 2. Research recommendations with photographs (2020-21):

I. Department of Post-Harvest Technology:

a. Technology for production of Indian gooseberry (Aonla) murabba

Recommendation for industry:

The entrepreneurs interested in the production of Indian gooseberry (aonla) shredded murabba are advised to adopt the processing technology developed for the purpose by Anand Agricultural University, Anand. The technology involves the blanching of aonla fruits in water at 100°C for 6 min followed by shredding through 5 mm stainless shredder. Final product is prepared by using aonla shred, sugar and spices mix followed by thermal processing. The developed aonla shredded murabba can be stored safely for 180 days at the ambient condition.

Overview of experiment

b. Development of Production Technology for Vegetable based Juice from Carrot and Tomato

Recommendation for industry:

The entrepreneurs interested in the production of vegetable based blended juice from carrot and tomatoes are advised to adopt processing technology developed for the purpose by the Anand Agricultural University, Anand. The technology involves the blanching of 15 mm carrot slices in water at 100°C for 8.5 min.

Blended juice is prepared by using carrot juice (43.34%), tomato juice (43.31%), lime juice (6.0%) and mint extract (7.35%) followed by thermal processing at 85°C for 20 min. The developed blend juice can be stored safely for 90 days at the ambient condition.

Overview of experiment

II. Department of Basic Science:

Comparison of different statistical models to forecast the area, production and productivity of major fruit crops in Gujarat (Community)

Recommendation for scientific community:

It is recommended that ARCH/GARCH model can be used to describe the pattern of area, production and productivity of banana crop in Gujarat. In case of mango crop, ARIMA model can be used to capture the pattern of area and productivity, whereas ARCH model can be used to capture the pattern of production.

3. Output during 2020-21 [No. of trials allotted (new / ongoing) and conducted successfully]

No. of ongoing trails : 13

No. of new trails : 06

4. Salient achievements during the year with photographs and information (Other than approved recommendation): **NIL**
5. Variety/ Breed/ Machinery etc. Released / developed with brief information and photographs.:

➤ **Endorse the chrysanthemum variety Ratlam Selection.**

Ratlam selection developed by department of floriculture and landscaping, PAU, Ludhiana in the year of 1997, performing better in our region also. Considering the performance of proposed variety, it has been proposed to endorse Ratlam Selection in the irrigated conditions of middle Gujarat during *Rabi* season.

Salient features/merits of the proposed variety Ratlam Selection

1. The proposed variety recorded 40.78 t/ha average flower yield which exhibited 130.27 and 29.83 per cent higher flower yield over the checks IIHR 6 and Sunil, respectively in middle Gujarat condition
2. The growth habit of proposed variety has determinate type with broad leathery leaf texture
3. The proposed variety has early flowering, white in colour with semi-double flower head
4. This variety has less prevalence of aphid population as compared to the checks IIHR 6 and Sunil
5. The flower of the variety has good shelf life
